A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, 5, 8, 9, and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Kato (US 5,773,881).

4. Regarding Claim 1, Kato discloses a dynamic quantity sensor comprising :
a sensor board (15) (Marked-up Figure 7) including a movable portion (16) and a silicon layer (17) (fixed end) wherein the movable portion is displaced under application of a dynamic quantity and the silicon layer is separated from the movable portion by an insulator (4) (pedestal)
a circuit board (3) for transmitting to and receiving electrical signals from the sensor board (15), wherein the circuit board (3) is disposed to confront the one surface of the sensor

board through a gap portion and to cover the movable portion (16), and the sensor board and the circuit board are bonded to each other around the gap portion so that a bonding portion is formed that substantially surrounds the gap portion.

5. Regarding Claims 2 and 9, Kato discloses a dynamic quantity sensor, wherein the sensor and the circuit board are sealingly wrapped by mold (resin) material (31) (Col. 6, line 21).

Regarding Claim 5, Kato discloses a dynamic quantity sensor comprising a lead frame (upper end of 7) for transmitting electrical signals to an exterior, wherein the sensor board is bonded to the lead frame on another surface opposite to the one surface of the sensor board facing the circuit board.

7. Regarding Claim 8, Kato discloses a dynamic quantity sensor wherein the sensor board and circuit board are electrically connected to each other by bonding wires (5).

8. Regarding Claim 20, Kato discloses a dynamic quantity sensor comprising:
a sensor board (15) including a moveable portion at one surface side thereof (bottom side, 16), wherein the moveable portion is displaced under application of a dynamic quantity, and

a circuit board (3) for transmitting to and receiving electrical signals from the sensor board (15), wherein the circuit board is disposed so as to confront one surface of the sensor board through a gap portion and to cover the moveable portion, and wherein the sensor

board and the circuit board are partially bonded to each other around the gap portion (at 24).
